DETAILED ACTION

Amendment

1. Acknowledgement is made of Amendment filed 01-31-11.
2. Claims 1 and 15 are amended.
3. Claims 2-4, 6, 12-14, 16-18, 20 and 26-28 are canceled.

Allowable Subject Matter

4. Claims 1, 5, 7-11, 15, 19 and 21-25 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter:

Claims 1, 5 and 7-11 are allowable because the prior art of record neither anticipates nor renders obvious the limitations of the base claim 1 in combination as claimed, including:

an opening in the housing of an X-ray tube, wherein a coolant oil is circulated through the housing at an overpressure to cool the X-ray tube during operation thereof; a printed circuit board mounted to the housing and having at least first and second layers, the at least first and second layers being configured without a continuous opening such that the printed circuit board is a liquid-tight closure that prevents the coolant oil from flowing outside of the housing; a seal disposed around the opening in the housing and between the printed circuit board and the housing; a pressure plate that contacts an underside of the printed

circuit board and is mounted on the housing such that the pressure plate presses the first layer of the printed circuit board against the seal around the opening in the housing such that the first layer of the printed circuit board forms the liquid tight closure.

Claims 15, 19 and 21-25 are allowable because the prior art of record neither anticipates nor renders obvious the limitations of the base claim 15 in combination as claimed, including:

disposing a seal around the opening in the housing and between the printed circuit board and the housing, disposing a pressure plate that contacts an underside of the printed circuit board to press the printed circuit board against the seal around the opening in the housing, mounting the printed circuit board comprising a first layer on the housing of an X-ray tube, wherein a coolant oil is circulated through the housing at an overpressure to cool the X-ray tube during operation thereof, the printed circuit board having no continuous opening such that the printed circuit board is a liquid-tight closure that prevents the coolant oil from flowing to the outside of the housing, wherein the first layer spans the opening, and mounting the pressure plate on the housing such that the pressure plate presses the first layer of the printed circuit board against the seal around the opening such that the first layer of the printed circuit board forms the liquid-tight closure.

After carefully review the specification and the claims in the application and art search, considering what is claimed as a whole that the aforementioned

limitations are believed to render said claims 1, 15 and all claims dependent thereof patentable over art of record.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
